Re: "Coronavirus Operations Planning"

Dear Mr. Mack;

As you are aware, the Coronavirus (COVID-19) has been found in our State and several of our service areas. Due to the amount of positive test results in the United States, the World Health Organization has now considered this virus a pandemic. In an effort to slow down the spread of the virus, Governor Wolf called for closures of many facilities in Montgomery County which has also led to cancellations of events, schools, daycare facilities and businesses in Montgomery County and several other surrounding Counties. Some of these closures will last for fourteen days or longer. Most recently the virus has been identified in Cumberland County. The virus and its spread rate is unpredictable for all of us as well as the CDC.

Advanced Disposal Services as your municipal solid waste contractor, will continue to collect waste and recycling as scheduled for your municipalities. Should there be a positive test result for Coronavirus with one or more of our employees, we would be forced to quarantine our staff and cease operations for our service area for some period of time, until normal operations could be resumed. Communications during these situations would be ongoing daily should this situation occur. If the situation does happen, our Management Team will meet with you to discuss recovery efforts, timeframes or different options for recovery of the material in your municipality.

Unfortunately the predictability of this virus is only speculation at this time, yet new cases occur daily throughout the State. As stated above, we will constantly communicate with you with any updates that we have regarding service interruptions or cancellations.
